

402 - NON-TOXIC ANTI-SPATTER

High Temperature Formula

Non-Toxic Anti-Spatter is specifically developed for high temperature applications up to 400°. This revolutionary formula contains a heavier molecular weight than most water based anti-spatters for a thicker, higher viscosity material. The proprietary anti-corrosion additive will also protect against rusting. 402 can be sprayed or brushed on and can be welded through while wet or after drying. 402 is paint compatible and easily wipes away with water or a damp cloth and leaves no residue.

402 does not contain any chlorinated solvents, will not carbonize and is odor free.
